-!-TISSUE SPECIFICITY: Strongly expressed in prostate, liver, kidney, breast and penis. Also expressed in pancreas, esophagus, stomach, deodenum, colon, trachea, lung, salivary glands and fallopian tube. PSP94 is expressed in lung and breast, whereas PSP57 is found in kidney and bladder.
-!- MISCELLANEOUS: SPECIFIC RECEPTORS FOR THIS PROTEIN ARE FOUND ON SPERMATOZOA AND IN THE PROSTATE.
-!- SIMILARITY: Belongs to the beta-microseminoprotein family.

Can bind to fibrir laminin and type V collagen.

SUBUNIT: Homotrimer; disulfide linked.

SIMILARITY: Belongs to the thrombospondin familer.

SIMILARITY: Contains 1 VWFC domain.

SIMILARITY: Contains 3 EGF-like domains.

SIMILARITY: Contains 3 TSP type-1 domains.

SIMILARITY: Contains 7 TSP type-3 domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        268

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ISOId=P08118-2; Sequence=VSP_003275, VSP_003276;
TISSUE SPECIFICITY: Strongly expressed in prostate, liver, kidney, breast and penis. Also expressed in pancreas, esophagus, stomach, deodenum, colon, trachea, lung, salivary glands and fallopian tube. PSP94 is expressed in lung and breast, whereas PSP57 is found in kidney and bladder.

MISCELLAMBOUS: SPECIFIC RECEPTORS FOR THIS PROTEIN ARE FOUND ON SPERMATOZOA AND IN THE PROSTATE.

SYNILARITY: Belongs to the beta-microseminoprotein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBCELLULAR LOCATION: Secreted.

mitted (WAY-2000) to the EMBL/GenBank/DDBJ databases.
FUNCTION: Dorsalizing factor. Key developmental protein that dorsalizes early vertebrate embryonic tissues by binding to ventralizing TGF-beta family bone morphogenetic proteins (BMPs) and sequestering them in latent complexes (By similarity).
SUBCELLULAR LOCATION: Secreted (By similarity).
TISSUE SPECIFICITY: During gastrulation, levels are highest in the organizer region. Also present in the developing brain and

-!- SIMILARITY: Belongs to the nesprin family.
-!- SIMILARITY: Contains 1 actin-binding domain.
-!- SIMILARITY: Contains 2 calponin-homology (CH)
-!- SIMILARITY: Contains 1 Klarsicht domain.

The length of the repeat may be maintained because of a selective advantage to keep the prot large and allow a single molecule to extent more than 0,5 micrometers.

DOMAIN: The Klarsicht domain, which contains a potential transmembrane domain, is essential for the nuclear envelope
                                                                                                                                                                                                                                                                                                                                       5098
